Mechanical & I/E Construction

Central Tank Battery – Energy Company

Our Construction division has a workforce of over 150 highly skilled professionals dedicated to executing projects safely, on time, and within budget. With in-house fabrication capabilities and field expertise, we deliver seamless integration between design and construction—reducing risk, accelerating schedules, and guaranteeing quality.

Why PLC Construction?

- **Proven expertise** in mechanical and I/E construction
- End-to-end support from design through completion
- **Diverse portfolio** including cryogenic facilities, gas processing plants, and midstream infrastructure
- **Extensive renewable energy** experience, including building natural gas facilities
- **Safety-first** approach for every project
- **Trusted partner** with a diverse team of skilled professionals, capable of managing a wide range of projects across multiple industries

Precision Delivered. Performance Guaranteed.

(Permian Basin, TX)

PLC Construction was awarded the mechanical and instrumentation/electrical (I/E) construction of a centralized tank battery in the Permian Basin. Our scope included setting critical equipment, fabricating and installing pipe spools, hydrotesting all required piping, and performing complete installation and commissioning of electrical and safety systems.

Mechanical construction deliverables were completed in alignment with engineering specifications, incorporating a modular and standardized design approach. This strategy not only streamlined the current project but also established a scalable framework for future CTB developments—enabling faster design cycles, efficient construction, and improved adaptability across multiple sites.

By combining precision engineering with expert execution, PLC delivered a facility that operates efficiently and autonomously, reinforcing our commitment to excellence in oil and gas infrastructure projects.

From Design to Operation—We Make It Seamless

Our team is committed to delivering high-quality workmanship, exceptional customer service, and timely completion within budget. By combining precision engineering with expert execution, PLC ensures every facility operates safely, efficiently, and autonomously.

Partner with PLC Construction today –

Our dedicated team provides full EPC services for a plethora of industries and projects nationwide. When you partner with PLC, you gain more than a contractor—you gain a true EPC partner committed to technical excellence, operational efficiency, and long-term value.
